## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-10 are rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Prengel et al [5223360]. Prengel et al teaches an image forming method of exposing a material having colored magnetic pigments and moving a magnetic over the curable medium note Col. 2 lines 30-55. The magnetic force will magnetically align the pigments to produce a colored image. The image can be on a paperboard strip note Example 2 or a glass plate note Example 6. The pigments can be from red to violet or from blue to green or black. Note Col.5 lines 25 – 35.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kawai [6583780] in view of Duck [3830633]. Kawai teaches the use of magnetophoretic particles each colored as primary colors note Col. 2 lines 50-65. These particles are in the form of microcapsules. The use of an optical hardening resin as the binder is taught

in Col. 2 lines 15-30. Duck teaches the curing of a magnetic image in a matrix. The matrix may include a photopolymerizable material note Col. 4 lines 45-60. It would be obvious to one of ordinary skill in the art at the time of applicants' invention with a reasonable expectation of success to use the photopolymerizable matrix utilized to freeze the magnetic microcapsules in the desired image once the migration of the magnetophoretic forms an image that is to be permanent.
